

# Qubix CloudBridge

Data Integration. Data Management. Lift & Shift.  
Dimension Management. Secure. User Owned.

Gain full data integration between your on premise environment and your Oracle Cloud applications with Qubix CloudBridge. This data agnostic tool provides a user-driven, seamless ability to move data from on premise to multiple Cloud applications, reducing the costs and complexity introduced by alternative approaches.

# Accelerate Your Path to the Cloud

Integrate, transform and upload data from multiple sources into Oracle Cloud Performance Management and Business Analytics products, simply, securely and rapidly with Qubix CloudBridge.

Qubix CloudBridge understands how Oracle organises and formats various types of data and key application structures, such as dimensions and hierarchies. Using a proprietary approach - our 'secret sauce' - Qubix CloudBridge can be used to not just seamlessly move data from on-premise to the Cloud, but it can also be used to perform key application management tasks such as managing dimensions and hierarchies in an easier-to-do way than currently possible

## Data Integration

Integrate data between on premise applications and the Oracle Planning Budgeting Cloud Service. Our data agnostic tool will take source data from multiple source applications, including SQL, ERP or Business Intelligence environments. Data flows are automatic, or user triggered, ensuring integrity and confidence in data across the enterprise.

## Lift and Shift

Designed to help move existing Oracle Essbase and Hyperion Planning applications to the Cloud, the Qubix CloudBridge application can clone existing applications and transform them into a format ready for a rapid "lift & shift" to the Cloud. Historical data can also be loaded, thus removing the need for additional complex and expensive software, or for additional lengthy implementation consultancy to rebuild applications in the Cloud.

## Key Features:

- Guided workflows
- Automated data loading and mapping
- Pre-packaged system adapters
- Full Support for Standard file formats, such as CSV
- Data Validation and error checking
- Works with multiple cloud applications

## Data Management

Qubix CloudBridge's simple user interface provides a wizard walkthrough of loading data and metadata seamlessly. Data is validated before it is transmitted securely to the Cloud and a full audit trail is provided to ensure confidence in the data integrity. The process of transferring data is triggered when new data is available to reduce manual intervention and increase the efficiency of the process.

## Dimension Management

When your business changes, your applications need to reflect those changes, for example if you acquire a business, introduce a new region, or add a product line. Qubix CloudBridge enables business users to create and edit application dimensions via a drag-and-drop interface. We do this in a smart way so that your live application doesn't have to be shut down while you make your changes.

Existing approaches to solve this problem require multiple steps and administration permissions that most businesses prefer not to share. Qubix CloudBridge dimension management is an easier way to adjust dimensions, modify hierarchies and define different member attributes with a simple-to-do drag and drop user experience.

## Designed for Business Users

Reduce or eliminate reliance on IT and place the power back into the hands of the user. With systems increasingly being controlled departmentally, both on premise and cloud based, there is a real need for user friendly easy-to-do tools that finance users can own. Today's alternatives to Qubix CloudBridge are expensive and complex, Qubix CloudBridge makes it easier to get things done, reduces the time and effort to achieve key outcomes, and increases user adoption and confidence.

## Security First

The Qubix CloudBridge application requires access to your existing data and Oracle Cloud applications that you control. The application is designed to sit behind your firewall, and data is transferred to the Cloud using high-grade 128bit encryption.

## Key Features:

- Dimension Management
- Hierarchy management
- Clone existing Essbase and Hyperion Planning applications
- High-grade security
- Full audit trails
- Easy-to-do design

## System Requirements:

Qubix CloudBridge requires the following for full capability:

- Windows Server 2008 or above
- Oracle Database 11g or Microsoft SQL Server 2005 and above
- Browser support: Windows Explorer 11, all versions of Google Chrome, Apple Safari and Mozilla Firefox

# How We Help

We are Oracle's leading Oracle Cloud solutions implementation partner. As an increasing number of clients adopt cloud based Software-as-a-Service solutions, we have re-imagined how to implement these technology advancements to make them affordable and accessible to businesses both large and small. Our innovations include:

- An online Go-Live Portal, which includes a wizard to guide clients through the deployment process.
- A range of good, better and best fixed scope offerings, that reduce complexity and speed up the time to benefit.
- Consulting-as-a-Service fees, which remove large upfront implementation costs.
- The Qubix CloudBridge solution, the first product designed specifically to integrate on-premise systems with Oracle's Planning and Budgeting Cloud Service and Business Intelligence Cloud Service.
- Free monthly training to ensure clients can maximise their self-sufficiency and expertise
