

5 STEPS: Cloud Journey Methodology

Qubix

Qubix has created a predefined best practice process to deploy your Oracle Cloud EPM application quickly, predictably, and affordably. It consists of five core components:

01

Needs Analysis Survey

We have you complete our unique Needs Analysis Bot (NAB), an app that automates and streamlines the assessment of your key requirements.

- understand your business processes
- uncover potential risks and pitfalls

02

Transformation Workshop

We work with you to review your business processes and advise you how to align them with 'best in class' methods.

- we share industry best practices
- aimed at optimizing your business processes

03

Process and App Design

In this phase, we start translating your business processes to an application design.

- **build planning application framework**
- **define planning types, periodicity, etc.**

04

Implementation Services

Based on our previous workshops, we will have defined the business dimensions and now configure these dimensions and their attributes in the Cloud.

- **model your business dimensions and attributes**
- **configure business logic and drivers**

05

User Enablement

We understand that user adoption drives true value so we will deliver user enablement to help you maximize your return on investment.

- **end-user enablement workshop**
- **application handover**

QTS QuickStart

If you are implementing or plan to deploy an Oracle Cloud EPM solution, we offer a uniquely flexible model that can rapidly deliver the right outcome for you - **Learn more about QTS QuickStart can help you.**
