

Qubix Value 2 Cloud Approach

Qubix can help you pivot toward the cloud, with multi-platform experience, expert systems-integration talent, and powerful accelerators to speed the time to value.

Many businesses have invested considerably in their Hyperion, OBIEE, E-Business Suite and Oracle database on-premises systems, often in customizations and bespoke enhancements. These frequently complex environments have supported the business well, but they have also hindered the ability to adopt innovations, reduce costs and seize new opportunities.

Although many recognize the value cloud applications and infrastructure provides, articulating the business case, analyzing the current system landscape and evaluating cloud migration routes remains challenging. It's this complexity and risk that necessitates a thoughtful, proven approach, with an informed point-of-view, before making the right decision. This is where Qubix can help.

Value 2 Cloud Approach

(1) The Q.bot™ Diagnosis

The Q.bot™ application will intelligently drive the assessment and design of the most successful path to the cloud. Not every workload moves to the cloud the same, and some existing processes can and should be improved. We make those decisions here.

(3) Agree Scope and Investment

Based on the collaboration & review stage, the scope of work is drafted to deliver the business case. The solution architecture, migration strategy, resource requirements, timelines, risk mitigation plan, change approach & investment plan are all published.

(2) Collaborate & Review

We run through the Q.bot™ powered cloud migration assessment, gather feedback and recommend the core principles & direction of the path to the cloud. All stakeholders are informed and included to create a winning business case.

(4) Project Initiation

We're not only technology experts but experienced change managers. We will drive and control your engagement from start to finish; ensuring the solution is fit-for-purpose, fulfils your requirements, and delivers the desired benefits & business case.

Allied Irish Bank eliminates its reliance on an on-premises planning process that was inefficient and moves to the cloud with Qubix

THE QUBIX DIFFERENCE

Highly successful, affordable capabilities without compromise.

Multi-Cloud Integrators

Moving to cloud-platforms requires an in-depth underlying technical knowledge of complex inter-related systems. The Qubix team are experts in critical areas including enterprise architecture, military-grade security, data-integration and API interfaces.

Broad Industry Experience

We have deep experience across thirty different industries, ranging from start-up businesses to global banks. Moving workloads to the cloud isn't an industry-specific challenge. Talking industry-specific language makes a difference.

Pre-Defined Cloud Models

Our cloud-migration accelerators are underpinned by 30+ years of experience across a variety of solutions, technologies, and industries.

Unique IP

We bring proven expertise curated from 1,000+ engagements globally of innovative delivery tools and unique IP, such as Qubix Cloudbridge.

TOP QUBIX CLOUD DESTINATIONS

Move from on-premises ERP, EPM, Analytics and Database to the cloud with Qubix.

- Hyperion Planning → Oracle EPM Planning and Budgeting
- Hyperion Financial Close Management → Oracle EPM Financial Consolidation and Close
- Hyperion Account Reconciliation Management → Oracle EPM Accounts Reconciliation and Close
- Hyperion Profitability and Cost Management → Oracle EPM Profitability and Cost Management
- Hyperion Essbase → Oracle Essbase Cloud
- Oracle Business Intelligence Enterprise Edition → Oracle Analytics Cloud
- Oracle E-Business Suite → Oracle ERP Cloud
- Oracle Database → Oracle Autonomous Database

Multi-cloud and platform integration expertise.
