

KEY FEATURES

Enable the smooth flow of data between your apps, processes and systems with a central hub for data integration and master data management.

Master data hub

Cloudbridge acts a single, centralised interface for users to validate, cleanse, synchronise and enrich master data across your apps and enterprise systems. This capability ensures that the information accessed by users is trusted and accurate.

Visual process-builder

Cloudbridge's Process-Builder provides a highly visual experience to create data flows and multi-step integration tasks. In one place, users can see and manage all the components and processes that make up your IT landscape.

Smart process automation

Build multi-step processes and automate their execution via a scheduler. Use either file or time-based triggers. Run database refreshes and business rules as part of the process automation.

Data governance

Centralised change approvals, access permissions, email alerts and a full audit trail ensures data governance policies are followed with full traceability provided at every stage.

EXAMPLE USE-CASES

Here are some of the ways in which Cloudbridge is helping our customers:

- Month-end loads of new actuals from ERP to Financial Planning and Budgeting applications, including data from EBS, Cloud ERP, Netsuite and SAP
- Synchronisation of the chart of accounts and other hierarchies between ERP and Financial Planning and Budgeting applications
- Real-time entry of orders received from global EPOS systems into ERP
- Export of data and from Financial Planning to Consolidation and Close application
- Export of data from Financial Planning to Analytical application
- Application of user-defined rules to map codes between ERP and EPM hierarchies
- Providing a spreadsheet-style UI to check and maintain data in staging databases
- Performing sanity checks on inbound data to the EPM application and reporting any problems
